DETAILED ACTION

Claims 1-13 are pending.

Election of Species

1. Claims 1-13 are generic to a plurality of disclosed patentably distinct species comprising substituted **quinazoline**, substituted **quinoline** and substituted **naphthalene**. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. During a telephone conversation with Ms. Mary Ellen Devlin on 11-30-05 a provisional election was made without traverse to prosecute the invention of **quinazoline** species as exemplified by the **first compound in claim 7**. Affirmation of this election must be made by applicant in replying to this Office action.

Art Unit: 1624

The elected species falls within the scope of claims 1-13 wherein formula I or Ia has the following substituents:

- X is N;
- Y is an unsubstituted methylene group;
- Z is N (that is the bicycle having X=Y-Z is a **quinazoline**);
- R¹ is 2,5-dihydropyrrol-1-yl-carbonyl .

Claim Rejections - 35 USC § 112, Second Paragraph

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The following reasons apply:

- a. Claim 1 recites the limitation of “a group which may be converted in vivo into a carboxy group,” which has indefinite metes and bounds because it is not clear what constitutes such a group. Claim 1 also recites “prodrugs” which is a broad limitation of the one cited above.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection

desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim recites the broad recitation , and the claim also recites which is the narrower statement of the range/limitation.

b. The phrase "optionally substituted" also renders the claim indefinite because in the absence of the specific moieties intended to effectuate modification by "substitution" or attachment to the chemical core claimed, the term "substituted" renders the claims in which it appears indefinite in all occurrences wherein applicant fails to articulate by chemical name, structural formula or sufficiently distinct functional language, the particular moieties applicant regards as those which will facilitate substitution, requisite to identifying the composition of matter claimed.

The two references cited on PTO-892 show state of the art only. While they teach quinazoline compounds, they fail to teach a substituent having pyrrolidinyl as represented by the instant R¹.
